                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                267
```

The sequences given in AAR93553-54 represent the heavy and light chains respectively of a monoclonal antibody against a 65 kD antigen of human cytomegalovirus (hCMV). The DNA's encoding these sequences were amplified using the sequences given in AAT18040-58. The monoclonal antibody may be used in the diagnosis of hCMV

Sequence 475 AA

                                                                                                                                                                                                                                                                                                                                                                                            A polypeptide (AAW11641) comprises a leader sequence, RF-2 heavy chain variable region (see also AAW11635), and human gamma 1 constant region. RF-2 is a human monoclonal antibody (hMAb) specific for the fusion protein of respiratory syncytial virus (RSV). The polypeptide can be produced in eukaryotic host (e.g. CHO) cells transfected with vector NEOSPLA incorporating a DNA construct (AAT61279) including the RF-2 VH sequence. RF-1 and RF-2 heavy and light chains (see also AAW11638-40) are similarly produced. The transfected host cells provide a constant, stable supply of anti-RSV F-protein hWAbs for use in the treatment or prevention of RSV infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
Novel fusion protein constructs comprise a fibroblast growth factor (FGF) receptor (FGF-R) extracellular domain (ECD) lacking the immunoglobulin (Ig) I segment fused to a heterologous oligomerization domain that comprises an immunoglobulin Fc region, hinge region, CH1, CH2, CH3 or CH4 region, or light chain of an immunoglobulin molecule, or a peptide with a leucine zipper motif. The Ig I segment is not necessary for binding of
                                                                                                                                                                                                                                      New polypeptide comprising a fibroblast growth factor receptor extracellular domain fused to a heterologous oligomerization domatreating FGF-, angiogenesis-, or FGF receptor-mediated disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FGF-R; fibroblast growth factor receptor; extracellular domain; IgG1; immunoglobulin; G1; oligomerization domain; Fc region; fusion protein; inhibitor; dimer; antagonist; cytostatic; anti-diabetic; vulnerary; ophthalmological; anti-proliferative.
                                                                                                                                                                                    Claim 14; Page 58-59; 70pp; English.

The Ig I deletion further increases the affinity for aFGF and heparin, protects the core of the molecule from proteolysis, and abrogates the heparin requirement for aFGF binding. The new fusion polypeptides are better FGF inhibitors than FGF-R monomer proteins. The FGFR-Ig Fc fusion dimers are active as FGF antagonists at subnanomolar concentrations and were 20-fold more potent than the FGF-R monomer protein as competitors of bFGF binding to immobilized FGF-Rs. The fusion constructs are useful to treat FGF-, angiogenesis-, or FGF-R-mediated disorders, such as tumourigenesis (e.g. bladder, breast, lung, rectal, testis and cervical tumours), neovascularization (e.g. diabetic retinopathy, neovascular glaucoma, wound healing and corneal scarring) and hyper-proliferation of vascular smooth muscle cells (e.g.

                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                       Novel fusion protein constructs comprise a fibroblast growth factor (FGF) CC receptor (FGF-R) extracellular domain (ECD) lacking the immunoglobulin CC (Ig) I segment fused to a heterologous oligomerization domain that CC comprises an immunoglobulin Fc region, hinge region, CH1, CH2, CH3 or CH4 cegion, or light chain of an immunoglobulin molecule, or a peptide with a CC leucine zipper motif. The Ig I segment is not necessary for binding of CC acidic FGF and basic FGF (BGF). The Ig I deletion further increases the CC affinity for aFGF and heparin, protects the core of the molecule from CC proteolysis, and abrogates the heparin requirement for aFGF binding. The CC proteins. The FGFR-Ig Fc fusion dimers are active as FGF antagonists at CC subnanomolar concentrations and were 20-fold more potent than the FGF-R monomer protein as competitors of bFGF binding to immobilized FGF-Rs. The CC fusion constructs are useful to treat FGF-, angiogenesis-, or FGF-R-CC mediated disorders, such as tumourigenesis (e.g. bladder, breast, lung, CC rectal, testis and cervical tumours), neovascularization (e.g. diabetic retinopathy, neovascular glaucoma, wound healing and corneal scarring) and hyper-proliferation of vascular smooth muscle cells (e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC (Ig) I segment fused to a heterologous oligomerization domain that CC comprises an immunoglobulin Fc region, hinge region, CH1, CH2, CH3 or CH4 CC region, or light chain of an immunoglobulin molecule, or a peptide with a CC leucine zipper motif. The Ig I segment is not necessary for binding of CR4 acidic FGF and basic FGF (bFGF). The Ig I deletion further increases the Affinity for aFGF and heparin, protects the core of the molecule from CR5 proteolysis, and abrogates the heparin requirement for aFGF binding. The CR5 mew fusion polypeptides are better FGF inhibitors than FGF-R monomer CC proteins. The FGFR-Ig Fc fusion dimers are active as FGF antagonists at CC monomer protein as competitors of bFGF binding to immobilized FGF-R. The CC mediated disorders, such as tumourigenesis (e.g. bladder, breast, lung, crectal, testis and cervical tumours), neovascularization (e.g. diabetic cretinopathy, neovascular glaucoma, wound healing and corneal scarring) and hyper-proliferation of vascular smooth muscle cells (e.g. branches).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The ScFv antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory disease including arthritis, hypersensitivity, autoimmune disease, cancers, central nervous system diseases including Parkinson's disease, gastrointestinal disorders, infections, diabetes, Helicobacter-related diseases, and other immune disorders. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              맑
                        This invention relates to a new antibody library which comprises at 10 cells, each of which comprises at least one integrated retroviral vector expressing an antibody light or heavy chain. Antibodies are of increasing importance in human therapy, assay procedures and diagnosti
                                                                                                                                                                                                          New antibody library comprising cells comprising at least one integrated retroviral vector expressing an antibody light or heavy chain, useful in preparing a composition for diagnosing or treating disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   28-MAR-2002; 2002US-036BB0BP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  screening antibody libraries containing large numbers of antibodies. The antibody library of the invention addresses this need, with the additional advantage of strict control over multiplicity of infection (MOI), and is useful in preparing a composition for diagnosing or treating a wide variety of disorders. The present sequence is the amino acid sequence of the LL2HCF protein, which was encoded by the Gatteway retroviral vectors used in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to an anti-Death receptor 4 (DR4) antibody. The antibodies of the invention are useful for inducing apoptosis in mammalian cancer cells such as colon cancer cells and for treating an immune-related disease in a mammal such as arthritis and autoimmune

                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents the heavy chain variable region of a chimeric compuse/human F19 antibody (chF19HC). F19 (ATCC Accession number HB 8269) compused human F19 antibody (chF19HC). F19 (ATCC Accession number HB 8269) computed the computed his a cell surface molecule of reactive stromal computed his a highly consistent molecular trait of the reactive stroma of many types of epithelial cancer. Although F19 may be useful in vitro, e.g., for diagnosis, its applications for in vivo use computed his reproblematic as it elicits a human anti-mouse response which creduces the efficacy of the antibody in patients and impairs continued administration. This chimeric antibody was humanised by joining entire murine variable regions to human constant regions. However, humanised cantibodies produced by this method can still elicit an anti-mouse componse in humans, whereas antibodies humanised via CDR (complementarity determining region) grafting are less immunogenic in humans. Humanised componse in humans are useful for treating cancers e.g., colorectal cancers, conon-small cell lung cancers, breast cancers, head and neck cancers, continued content cancers, lung cancers, bladder cancers, head and neck cancers and content cancers. They are also useful for the detection of activated content patient. (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                           The invention describes a binding domain-immunoglobulin fusion protein that is capable of at least one immunological activity, comprising a binding domain polypeptide fused to an immunoglobulin hinge region polypeptide capable of specifically binding to an antigen, or an immunoglobulin heavy chain CH2 or CH3 constant region polypeptide fused
                                                                                                                                                                                                                                                             New human binding domain-immunoglobulin fusion protein useful for treating a subject having or suspected of having a B-cell disordemalignant condition e.g. rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC polypeptide. The fusion protein is useful for treating a subject having CC or suspected of having a B-cell disorder or malignant condition e.g. CC rheumatoid arthritis, myasthenia gravis, Grave's disease, Hashimoto's CC crythematosus, Sjogrens syndrome, immune thrombocytopenic purpura, CC psoriasis, scleroderma, cancer and inflammatory bowel disease such as CC Chron's disease and ulcerative colitis. The fusion protein retains the CC chility to participate in well known immunological effector activities CC including antibody dependent cell mediated cytotoxicity and/or complement CC fixation in complement dependent cytotoxicity, despite having structures CC that would not be expected to be capable of promoting the effector activities. It can be produced in substantial quantities that are CC typically greater than those routinely attained with single-chain CC antibody constructs. This is the amino acid sequence of a chimeric fusion CC protein created from the mouse anti-human CD20 single chain antibody variable fragment (scFv) and the human immunoglobulin G (IgG) fragment of CC crystallisation (Fv) tail, wild type hinge, CH2 and CH3 domains

```
CC comprising a binding domain polypeptide, an immunoglobulin heavy chain CC (H2 constant region polypeptide, and immunoglobulin heavy chain CC (H2 constant region polypeptide, and an immunoglobulin heavy chain CC polypeptide, and an immunoglobulin heavy chain CH2 constant region polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide, and the CH2 constant region polypeptide. The first cysteine region polypeptide, derived from (a) having 3 or more cysteine residues, where the first cysteine residues, where the first cysteine is not mutated, a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the first cysteine is not mutated, a cysteine residue, and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more than one (a) having 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more than one (cysteine residues, and a mutated human IgG1 immunoglobulin hinge region polypeptide contains to more than one (cysteine residues. The binding domain polypeptide contains to more than one (cysteine residues. The binding domain insulpedial activity comprising antibody capable of at least one immunoglobulin hinge region polypeptide contains (constitue the cell mediated cytotoxicity (ADCC) and complement fixation. The binding domain immunoglobulin fusion protein is constitue, producing the polymucleotide and a carrier, and complement fixation. The binding domain immunoglobulin fusion protein, a producing the binding domain. Immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain. Immunoglobulin fusion protein, a pharmaceutical romain immunoglobulin fusion protein, a pharmaceutical romain immunoglobulin fusion protein, a malignant condition or a B-cell disorder. Fig. 1 disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, multiple collected at a sarrier. The sequence is a bindin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CH2 constant region; CH3 constant region; IgG1; antibody dependent cell-mediated cytotoxicity; ADCC; complement fixation; malignant condition; B-cell disorder; melanoma; carcinoma; sarcoma; rheumatoid arthritis; myasthenia gravis; Grave's disease; type I diabetes mellitus; multiple sclerosis; autoimmune disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   fusion protein or polynucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple sclerosis or autoimmune disease. The present sequence is a binding domain immunoglobulin fusion protein-associated protein sequence. Note: The sequence data for this patent formed part of the printed specification and is also available in electronic format directly from USPTO at sequence brullpocID=20030118592. The authors have not identified the sequences in the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 499 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide that is fused to an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (GENE-) GENECRAFT INC
                                                                                                                    126
                                                                                                                                                                            82

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of a preferred heavy chain of a humanised CC antibody of the present invention. In the variable region of this CC sequence, the complementarity determining regions (CDRs) originate from CC murine monoclonal antibody 3D6 and the framework region from human CC germline VH segment DP-45 and J segment JH4. Novel humanised antibodies of the invention have CDRs from 3D6 and human framework sequences. These cC humanised antibodies shave binding affinities (affinity and epitope CC location) approximately the same as those of the mouse 3D6 antibody. The CC invention includes antibodies, single chain antibodies, and their CC fragments, as well as nucleotide sequences, vectors, transformed host CC cells, and methods of using the humanised antibody to treat, prevent, CC alleviate, reverse or otherwise ameliorate symptoms and/or pathology CC associated with Down's syndrome, (pre-)clinical Alzheimer's disease or CC (pre-)clinical cerebral amyloid angiopathy, and to inhibit formation or CC reduce Abeta plaque in the brain. The antibody agglutinates rhesus positive cells but not rhesus negative cells and is useful diagnostically and also for preventing haemolysis in newborn rhesus positive babies. Recombinant IgM-D7C2 can be produced by insect cells which have been transformed by a baculoviral vector comprising a D7C2 expression cassette. The present sequence is that of a recombinant IgM-D7C2 heavy chain fused downstream of a mouse VH signal

                     2 Polypeptides (AAW01821 and AAW01822) respectively comprise primatised forms of the light and heavy chains of cynomolgus monkey anti-human B7.1 antigen monoclonal antibody 16C10. Cloned 16C10 light and heavy variable genes (see also AAT62512 and AAT62513) are inserted into an expression vector (pref. NEOSplA) which contains human light and heavy chain constant region genes to allow prodn. of the primatised antibody in e.g. CHO cells. Primatised 7C10 and 7B6 anti-B7.1 antibodies have also been produced (see also AAW01817-20). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders and graft-versus-host disease. (Updated on 17-OC7-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a primatized form of the antibody 16C10 heavy C chain from macaque. This sequence is used in a method which studies new monoclonal antibodies (MAb's) that bind selectively to 87.1 (CD80) or to 87.2 (CD80) antigens and inhibits binding of these antigens to CD28. Such Mab's are specific immunosuppressants for treatment of diseases involving T cell/B cell interactions, particularly autoimmune disease, specifically idiopathic thrombocytopaenia purpura, systemic lupus erythematosus, type I dispathic thrombocytopaenia purpura, systemic lupus erythematosus, type inflammatory bowel disease, allergy and multiple sclerosis, graff vs. host diseases, B cell lymphoma, infections (including by human immune deficiency virus) or inflammatory disease and tumours. Optionally the MAb can be conjugated to a drug or toxin. MAb's, or their fragments, can also be used as imaging agents and as vaccines or immunogens to develop anticluding the diseases and molecule immunosuppressants. Blocking B7/CD28 interactions induces long-term, antigen-specific immunosuppression, i.e. it inhibits production of interleukin-2 (IL-2), T cell proliferation and antigen-specific immunoglobulin G (IgG) responses

                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a new use of a monoclonal antibody which CC specifically binds to B7.1 antigen (CDB0) and/or B7.2 antigen (CDB0) for CC inducing the apoptosis of B7+ cells. The invention is useful for treating CC diseases such as B cell cancer, lymphoma, a cancer where B cells promote CC the growth and/or metastasis of tumours, B cell lymphoma, B cell gromote CC leukaemia, and autoimmune diseases such as idiopathic thrombocytopenia CC purpura, systemic lupus, erythematosus, type 1 diabetes mellitus, CC rheumatoid arthritis, psoriasis, aplastic anaemia, inflammatory bile CC disease, allergy, multiple sclerosis or graft-vs-host disease. The CC contibody is useful for immunosuppression in a human or animal and for CC treating or preventing resistance to or rejection of transplanted organ CC trissue for treating proliferative and hyperproliferative diseases, for CC treating reversible obstructive airways disease, intestinal inflammations CC and allergies e.g. Crohn's disease and ulcerative colitis, food-related CC allergies e.g. migraine, rhinitis and eczema, and other types of CC allergies. The present protein sequence represents the heavy chain of CC and inhibit production of interleukin-2 (IL-2)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
         The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy chain CH2 constant region polypeptide that is fused to the hinge region polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide that is fused to the cH2 constant region polypeptide. The hinge region polypeptide to the CH2 constant region polypeptide. The hinge region polypeptide; a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge contains 2 cysteine residues, where the first cysteine is not mutated; a
                                                                                                                                                                                                                                                                            New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-JAN-2001; 2001US-0367358P

CC immunoglobulin hinge region polypeptide contains no more than one cysteine residue; and a mutated human IgG1 immunoglobulin hinge region CC polypeptide, derived from (a) having 3 or more cysteine residues; where CC the mutated human IgG1 immunoglobulin hinge region polypeptide contains CC no cysteine residues. The binding domain immunoglobulin fusion protein is CC capable of at least one immunological activity comprising antibody CC dependent cell-mediated cytotoxicity (ADCC) and comprising antibody CC dinding domain polypeptide is capable of specifically binding to an CC enstruct comprising the polynucleotide encoding the Dinding domain-immunoglobulin fusion protein, a recombinant expression CC construct comprising the polynucleotide (operably linked to a promoter), CC a host cell transformed or transfected with a recombinant expression CC construct, producing the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin cCC fusion protein or polynucleotide and a carrier, and treating a subject CC having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain fusion protein sequence multiple successory sequence, the protein sequence is a binding domain fusion protein sequence is a binding domain fusion protein-associated protein sequence. Note: The creation and is also available in electronic formed part of the printed specification can be entired to the printed specification can be entired to the printed specification can be entired by sequence and is also available in electronic formation fusion protein sequence. Note: The content sequence not sequence is a binding domain can be entired by sequence and content sequence is a binding domain fusion protein entired part of the 
                                                                  seqdata.uspto.gov/sequence.html?DocID=20030118592. The authors have not identified the sequences in the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified.

                                                                          The present sequence is the protein sequence of the heavy chain of a Chumanised antibody of the present invention. In the variable portion, the complementarity determining regions (CDRs) originate from murine complementarity determining regions (CDRs) originate from murine complementarity determining regions (CDRs) originates from human garmine VH segment DP-28 and the framework region originates from human garmine VH segment DP-28 and J segment JH4. Novel humanised antibodies of the invention have CDRs from 10D5 and human framework sequences. These chumanised antibodies have binding affinities (affinity and epitope continuous antibodies have binding affinities (affinity and epitope continuous includes antibodies, single chain antibodies, and their fragmente, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, as leviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical Alzheimer's disease or cherwise ameliorate symptoms and to inhibit formation or reduce Abeta plaque in the brain. (Updated on 23-OCT-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New humanized 10D5 antibody, useful for the manufacture of a medicament for treating Down's syndrome, clinical or pre-clinical Alzheimer's disease or cerebral amyloid angiopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Monoclonal antibody; 10D5; complementarity determining region; CDR; mouse; human; humanised antibody; antibody; Alzheimer's disease; Down's syndrome; cerebral amyloid angiopathy; neuroprotective; nootropic.

The antibody and its derivatives are useful in the diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplification

CC are useful for treating immune system diseases such as asthma, leukaemia accor other altergic or inflammatory diseases. Extracellular domains of (I) crepresent potential markers for screening, diagnosis, prognosis, follow-cc up assays, and imaging methods. (I) is useful as a target for drugs which inflammatory diseases such as allergic rhinitis, osteoarthritis, crimination, tissue damage and remodeling in asthma, and circular inflammatory diseases such as allergic rhinitis, osteoarthritis, Crohn's cdisease, psoriasis, rheumatorid arthritis, conjunctivitis, etc. (I) is cdisease, psoriasis, rheumatorid arthritis, conjunctivitis, etc. (I) is clientifying agents that bind with and/or modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid molecules (II) encoding (I) are useful in diagnosis and/or prognosis methods, and to detect the presence cuseful in diagnosis and/or prognosis methods, and to detect the presence cond/or amount of SIGLEC-BMS nucleotide sequences and/or SIGLEC-BMS condicible are useful as nucleic clone of SIGLEC-BMS gene copy number is determined for detecting cdiseases or disorders associated with SIGLEC-BMS transcripts or proteins. The SIGLEC-BMS antibodies are also used to detect, sort or isolate cells expressing SIGLEC-BMS proteins and in diagnostic imaging technology.

ANUBTO74-AAUBTO89 represent human SIGLEC amino acid sequences of the

                                                                                                                                                                   The invention relates to a novel binding molecule comprising at least one antigen binding site comprising in sequence the hypervariable regions CDR1, CDR2 and CDR3. The molecule of the invention has immunosuppressive, antipsoriatic, antiinflammatory, and antiallergic activity. The molecule of the invention is a CD45-Antagonist. The binding molecule or humanised antibody is useful as a pharmaceutical in the treatment of autoimmune diseases, transplant rejection, psoriasis, inflammatory bowel disease and allergies. The binding molecule has a binding specificity for both CD45RO and CD45RB in medicine, where the binding molecule is a chimeric, a humanised or a fully human monoclonal antibody. The sequence represents the heavy chain of the CD45RO/RB binding molecule
                                                                                                                                                                                                                                                                                                                                                             New binding molecule having at least one antigen binding site, useful a pharmaceutical in the treatment of autoimmune diseases, transplant rejection, psoriasis, inflammatory bowel disease and allergies.
                                                                                                                                               Sequence

            The present sequence is a fusion protein comprising part of human VCAM-1 and the FC region of human IgGI. The sequence encoding this protein was generated by integrating the VCAM-1 coding region into a plasmid designated pDEF24/IgGI, which encodes the hinge and constant CH2-CH3 domains of human IgGI. The sequence was then ligated to the expression vector pDEF24 and transformed into DH5a competent cells. The fusion protein was used as a control in adhesion experiments involving
                                                                                                                                                                                    Nucleic acids encoding ACAM, a human cellular adhesion molecule, for diagnosing, preventing and treating diseases associated with expression and activity, e.g. epilepsy and schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        neuroleptic; renal-active; antidiabetic; neuroactive; neuroprotectant; dementia; epilepsy; schizophrenia; peripheral nerve injury; diabetic neuropathy; fusion protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human foetal brain cDNA clones containing alternatively spliced full-
length variants of a novel adhesion molecule designated ACMA. ACAM.

nucleic acids and polypeptides may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate ACAM expression and activity such as dementia, epilepsy, schizophrenia, peripheral nerve injuries and diabetic neuropathies. They may be used to rectify mutations or deletions in a patient's genome that affect the activity of ACAM or to supplement insufficient ACAM production in a patient. Conversely, antisense nucleic acid molecules may be administered to down-regulate ACAM expression. The nuclectide sequence may also be used as a DNA probe in diagnostic assays (e.g. PCR) to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence determine which patients may be in need of restorative therapy. ACAM polypeptides may be used as antigens in the production of antibodies against ACAM and in assays to identify modulators (agonists and antagonists) of ACAM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 52.t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to genetically engineered CD19-specific immune CC cells which express, and bear on the cell surface membrane, a CD19-cC specific chimeric receptor. The CD19-specific chimeric T cell receptor CC consists of: (a) an intracellular signaling domain selected from zeta, ceta, delta, gamma or epsilon chain pf CD3, MB1 chain, B29, FcgammaRIII CC and FcepsilonRI, for an effector function of the immune cell; (b) at cleast 1 transmembrane domain and (c) at least 1 extracellular domain CC comprising a CD19-specific receptor. The compositions and methods of the present invention are useful for cellular immunocherapy of CD19 CC malignancies and for abrogating any untoward B cell function in CC autoimmune disorders such as lupus or rheumatoid arthritis. The present sequence represents a CD19:zeta chimeric immunoreceptor amino acid cequence. This chimeric receptor was constructed by PCR splice overlap CC extension and consists of human GM-CSF receptor alpha chain leader cpeptide, FMC63 Vh, Gly-Ser linker, FMC63 Vl, human IgG1 FC, human CD4 transmembrane domain and human cytoplasmic zeta chain

                                                                                                                                                                                                                                                                                                                                The invention relates to treating cognitive symptoms or reducing disease progression in a subject having a condition or disease associated with amyloid-beta peptide (Abeta). The method involves administering an amount of an anti-Abeta antibody that has greater affinity for soluble Abeta than 10^-9 M, that has affinity (KD) for soluble Abeta-40 or Abeta-41 higher than 10^-9 M, or that has greater affinity for soluble Abeta than antibody 266 has. The method or the anti-Abeta antibody is useful in preparing a medicament for treating cognitive symptoms or reducing disease progression in a subject having a condition or disease associated with Abeta. The condition or disease is Alzheimer's disease, Down's syndrome, cerebral amyloid angiopathy, vascular dementia, or mild cognitive impairment. The present sequence represents a humanised anti-Abeta antibody 266 heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating or reducing the progression of diseases associated with an beta peptide, e.g. Alzheimer's disease, vascular dementia or mild cognitive impairment, comprises administering an anti-amyloid-beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                17-AUG-2001; 2001US-0313576P.

Effecting rapid improvement of cognition in a subject having disease, Down's syndrome, cerebral amyloid angiopathy, or mil impairment, comprises administering anti-A beta antibody. having Alzheimer' or mild cognitiv

Disclosure; Page 21-23; 85pp; English.

The present invention relates to a method for effecting rapid in of cognition in a subject having a condition or disease related Abeta peptide. The method comprises administering an anti-Abeta The method is useful for treating cognitive impairments associate. peptide including those involved in Alzheimer's di associated with improvement antibody ç

The anti-Abeta antibody is useful for preparing a medicament effecting rapid improvement in cognition in a subject having Alzheimer's disease, Down's syndrome, cerebral amyloid angiopathy, or mild cognitive impairment. The present sequence represents a preferred heavy chain for a humanised 266 antibody

This sequence represents the preferred heavy chain. The humanised antibody of the invention may be used for diagnosing preclinical or clinical Alzheimer's disease. The antibody specifically binds an epitope, preferably the amyloid beta peptide (Abeta). The antibodies sequester Abeta from its bound, circulating form in blood and alter clearance of soluble and bound forms of Abeta in central nervous system and plasma. The antibodies specifically bind an epitope representing amino acids 13-28 of the Abeta molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
